FEEDBACK-REVIEW

to the educational professional program "Information Technologies and Project Management" to obtain a bachelor's degree in Computer Science, which was developed at the Department of Mathematical Modeling of the Yuriy Fedkovych Chernivtsi National University.

Currently, the direction of information technologies in Ukraine is experiencing the unprecedented growth rates of its development and a high demand for specialists in this field.

For many years Yuriy Fedkovych Chernivtsi National University has been training specialists for the IT industry. GLOBAL IT SUPPORT LLC has a constant dialogue and close cooperation with the Department of Mathematical Modeling of the University. The company's management and leading IT specialists have repeatedly participated in meetings with students and teachers of the Faculty of Mathematics and Informatics, and made their suggestions for improving educational programs.

The educational professional program "Information Technologies and Project Management" is aimed at in-depth study of modern methods and technologies of design, development and implementation of information systems. The educational program includes classroom and independent work of applicants, and also has a sufficient amount of practical training. In general, the educational professional program comprehensively covers various aspects of the study of information technologies, regulates the goals, expected results and implementation technologies for evaluating the quality of training of a higher education applicant in the specialty 124 "Computer Science".

The curriculum for training applicants for the educational professional program is saturated with fundamental and applied disciplines, the content of which

corresponds to the current state of the IT industry and allows applicants to expand their knowledge and professional skills in the field of information technologies, if necessary.

In our opinion, the high level of training of students of higher education under the educational professional program "Information Technologies and Project Management" is confirmed by the competencies they demonstrate during production practice on the basis of our company and graduates who already work as software developers at GLOBAL IT SUPPORT LLC.

I believe that the educational professional program "Information technologies and project management" can be recommended for implementation in the educational process, it will contribute to the acquisition of relevant knowledge and skills by future IT specialists who will be in demand on the labor market.
